

Plan a Visit

Turner Greenstead is collecting interest from schools and educational partners for future field trips and pilot programs.

Include with your inquiry

- School, grade level, and coordinator
- Estimated students, teachers, and chaperones
- Preferred dates and arrival time
- Number of buses or vehicles
- Accessibility, allergy, or medical needs
- Curriculum topics to emphasize

Program contact

Email: [Add program email]

Phone: [Add phone number]

Area: Chesterfield County / Richmond, Virginia

Quick FAQs

Grades: 2-6

Length: 120 minutes

Setting: Outdoor working gardenstead

Proposed price: \$15/student, \$450 minimum

Weather: Programs may adjust or reschedule for unsafe conditions

Program details, station availability, pricing, capacity, and policies are subject to final confirmation.

WHY EATS?

Four disciplines. One living classroom.

Students discover how food, water, soil, animals, energy, tools, and people work together.

ENGINEERING

Design, build, test, measure, and improve practical solutions.

AGRICULTURE

Explore plants, animals, growing systems, food, and stewardship.

TECHNOLOGY

Use tools, pumps, sensors, energy systems, and smart-farm ideas.

SCIENCE

Observe patterns, cycles, habitats, energy, matter, and living systems.

Built for the school community

- Grade-adjusted learning for Grades 2-6
- Small-group station rotations
- Teacher planning and classroom extensions
- Parent safety and preparation guidance
- School-leader partnership opportunities

Greenstead**
EATS FIELD TRIP EXPERIENCE

Grow. Learn. Gather.

Engineering | Agriculture
Technology | Science

A hands-on outdoor learning experience for students
in Grades 2-6.

120-MINUTE GUIDED EXPERIENCE

Richmond - Chesterfield Area, Virginia

Learn by doing

Each station combines a short explanation, a hands-on action, and a clear takeaway.

- Observe roots, leaves, insects, animals, water, soil, and energy
- Compare soil-based, hydroponic, and aquaponic growing
- Touch, sort, plant, measure, generate, build, test, and improve
- Work in teams with defined student roles
- Ask questions and share evidence-based observations
- Connect the farm experience to classroom learning

Learning outcomes

- Explain what plants and animals need
- Describe cycles involving water, nutrients, waste, and energy
- Identify renewable energy and resource reuse
- Use a simple engineering design process
- Recognize agriculture and environmental careers

Grade 2-3: observation, vocabulary, life cycles, needs, patterns.

Grades 4-5: measurement, systems, energy, data, design constraints.

Grade 6: efficiency, tradeoffs, environmental systems, iterative design.

A farm full of questions

A visit may use four or more stations depending on grade, season, weather, and program focus.

Core stations

- Raised beds and seed starting
- Pollinator and cut flower garden
- Compost and vermiculture
- Chickens, eggs, and animal care

Growing technology

- Kratsky and circulating hydroponics
- Aquaponics and water quality
- Vertical gardens, irrigation, and rainwater

Energy and engineering

- Solar, wind, bicycle, and water power
- Repurposed materials and design challenges

Outdoor systems

- Woodland habitat and weather
- Temporary shelter engineering and knots
- Backpack gear and preparedness

Future smart-farm stations may include sensors, robotics, drones, coding, and age-appropriate AI demonstrations.

A balanced field-trip flow

0:00-0:10

Arrival, welcome, safety, and group assignment

0:10-0:30

Hydroponics and aquaponics

0:30-0:50

Soil, compost, and worms

0:50-1:10

Farm animals and pollinators

1:10-1:25

Snack, restroom, and hand-washing break

1:25-1:45

Renewable energy and engineering challenge

1:45-2:00

Reflection, take-home activity, and departure

Teacher planning

- Submit attendance, transportation, and accessibility details
- Select curriculum themes and station emphasis
- Prepare students for outdoor learning and hygiene
- Confirm final pricing, policies, and visit agreement

Proposed standard: \$15 per student, \$450 minimum. Teachers free. Optional take-home planting +\$3.
